JWCI Ltd: Investing in the future

JWCI Limited is a long established company, located in the heart of the UK with our Head Office in Cheadle and manufacturing facilities in Fole, Uttoxeter.

We design, construct and install processing equipment for a wide range of customers in the dairy, food, chemical and other process industries.

The current economic climate is proving tough for many businesses but JWCI are 'bucking the trend' with big plans over the next 12 months.

With many years in the industry under their belt JWCI are investing in a site expansion of their current manufacturing facilities in Fole. The expansion will improve facilities and help meet the increasing demand for high quality engineering.

The larger workshops and improved employee facilities will increase productivity and allow JWCI to undertake larger commissions in-house and reduce manufacturing times.

There will also be a new testing facility for skids and equipment to minimize commissioning on site.

Holding a larger range of parts in permanent stock, thanks to the new expansion, will reduce delivery times even further for customers ordering plant processing equipment 7 days a week. An important service when plant down time can be so costly for manufacturers.

All this means that JWCI will now be offering a two year guarantee on all their prefabricated work as standard. This increase, from the usual 12 month

guarantee offered by many of their competitors, highlights the assurance they have in their products being of the highest quality.

The site expansion is due to be fully operational by July 2012 so why not pay us a visit?

For more information on parts ordering, products or any other services offered by JWCI Ltd please call Kerry on 01889 507177.
